**For more information on the contents of this newsletter or the U.S. Grains Council, its mission and programs, please contact Cary Sifferath at (202) 789-0789.**

*The U.S. Grains Council is a private, non-profit partnership of producers and agribusinesses committed to building and expanding international markets for U.S. barley, corn, grain sorghum and their products. The Council is headquartered in Washington, D.C. and has ten international offices that oversee programs in more than 50 countries. Financial support from our private industry members, including state checkoffs, agribusinesses, state entities and others, triggers federal matching funds from the USDA resulting in a combined program value of more than \$26 million.*

## Chicago Board of Trade Market News

Week in Review: CME Corn July Contract					
Cents/Bu	Friday June 17	Monday June 20	Tuesday June 21	Wednesday June 22	Thursday June 23
Change	-3.75		-23.75	7.25	-21.25
Closing Price	784.50		760.75	768.00	746.75
Factors Affecting the Market	Corn futures rallied sharply at the opening and followed through on Thurs.' break above trendline resistance, but weaker wheat and soybean prices pulled the market lower at the day's end. Few traders wanted to add risk heading into a 3-day weekend with favorable weather forecast for the US Midwest. Outside markets were mixed.	U.S. markets were closed in observance of the Federal Juneteenth holiday.	Corn pulled back and ended below the 20-day MA after the U.S. crop weathered last week's heatwave with little adverse effect. This week's forecast is favorable for crop development, which led to fund selling and some farmer hedge selling. Brazil's corn production is growing with above- expected yields and 11% harvest completion.	Corn futures traded an inside day on the charts as markets consolidated after Tues.' declines. USDA said corn good/excellent ratings fell 2% last week but remain above average. Basis is strong along the river system, supporting spot futures. US long-term weather forecasts remain hot and dry in July, which could spark another rally in futures.	Corn futures sold off sharply but bull spreading kept the July contract relatively well supported. July futures briefly traded below the 100-day MA but closed above that point. Crude oil futures declined again and pushed corn lower, as did the 23-bps rally in the USD. Macro-economic trends have been more influential recently and sparked fund liquidation.

**Outlook:** July corn futures are 37 ¾ cents (4.8 percent) lower in a holiday-shortened trading week with favorable weather in the Midwest and a broader market selloff creating the weakness. Technical conditions are starting to breakdown as well, leading to additional fund liquidation selling. Outside markets also offered little support to corn futures with crude oil futures pulling back to \$104/barrel and the U.S. dollar trading near 20-year highs.

The U.S. corn crop appears to have endured last week's heatwave largely unscathed, with the share of the crop rated good/excellent totaling 70 percent. That rating was down 2 percent from the prior week but 2 percent above the five-year average. According to the USDA's latest report, 95 percent of the crop is emerged, in-line with the five-year average. The weather forecast for the coming week features below-average temperatures for most of the corn belt with near-average precipitation. Temperatures should remain moderate heading into early July, but the long-term forecast still favors a hot, dry trend that will likely be bullish.

The weekly Export Sales report is delayed due to Monday's Federal holiday in the U.S., but the Export Inspections report featured 1.184 MMT of inspections. That figure was down 3 percent from the prior week but above pre-report estimates and put marketing year-to-date inspections at 46.162 MMT, down 18 percent. Despite the lower inspections figure last week, basis along the river and barge rates remain firm and at or above five-year highs as commercial and export demand remains strong.

From a technical standpoint, July corn futures failed to follow through on last week's rally above trendline resistance and that bullish development now looks like a false signal. The contract has survived the week's selling better than new crop futures due to strong bull spreading and steady commercial demand. So far, U.S. farmers have not been significant sellers on the decline, which has helped keep basis firm in most regions and support the spot contract. July futures briefly traded below the 100-day moving average on Thursday, but that break triggered short-covering and some end-user buying that helped push the contract off the day's lows. July corn looks to be stabilizing heading into first notice day at the end of this month and the outlook for new crop futures is largely weather-dependent. This week's shift towards favorable U.S. weather allowed the market to pull back from recent highs, but the long-term weather forecast remains bullish.

Sorghum	5%	10%	39%	45%
Barley	5%	14%	30%	45%

Source: USDA NASS, World Perspectives, Inc.

**U.S. Drought Monitor Weather Forecast:** A storm system near the coast of the Carolinas will bring chances for heavy rainfall to parts of the Eastern Seaboard over the next couple of days (June 23-24). Meanwhile, another storm system will intensify and move eastward from the Northern Plains to the Great Lakes. The trailing frontal boundary associated with this system will bring increased chances of rainfall to much of the eastern U.S. However, rainfall is likely to be hit-or-miss and remain below-normal for many locations, especially along the Lower and Middle Mississippi Valley. The passage of the frontal boundary in the eastern U.S. should bring more seasonal daytime temperatures by the start of the work week (Monday, June 27). An active Southwest Monsoon circulation is forecast to bring increased precipitation and below-normal maximum temperatures to parts of the Four Corners region, with below-normal maximum temperatures extending into the Central Plains.

The Climate Prediction Center's 6-10 day outlook (valid June 28 to July 2, 2022) favors above-normal temperatures across much of California, the Great Basin, and Eastern Rockies. Above-normal temperature probabilities also extend from the Central and Southern Plains eastward to the Appalachians and southward to the Gulf Coast. Near to below-normal temperatures are favored across the Northern Tier of the contiguous U.S. (CONUS), as mean mid-level high pressure is expected to remain farther to the south. Below-normal temperatures and above-normal precipitation are favored for much of the Four Corners region, associated with a robust Southwest Monsoon circulation. Near to above-normal precipitation probabilities also extend along the Northern Tier from the Pacific Northwest to the Great Lakes, associated with storm activity. Increased chances of below-normal precipitation across the northern Great Basin and from the Middle Mississippi Valley to the Northeast are associated with dry northerly mean surface flow and surface high pressure, respectively.

## Distiller's Dried Grains with Solubles (DDGS)

**DDGS Comments:** DDGS prices are another \$10/MT lower this week as physical markets remain thinly traded and futures prices pulled back sharply this week. The break in new crop corn futures as well as recent declines in soymeal futures has given way to lower pricing ideas. The DDGS/Kansas City soymeal ratio at 0.54, equal with last week's ratio and above the three-year average of 0.48. The DDGS/cash corn ratio is at 0.86 this week, up from 0.86 last week and below the three-year average of 1.06.

The volatility in outside grain and feed markets has impacted the DDGS market and indications are wide-ranging. Barge CIF NOLA offers are \$4-6/MT higher, on average, with barge freight driving much of the increase. FOB NOLA offers are up \$4-5/MT for spot shipment and up \$2-3/MT for deferred positions. Prices for 40-foot containers to Southeast Asia are widely mixed this week with lower offers for product into the Philippines, Indonesia, and Malaysia (averaging \$9/MT declines) but higher rates for product to Vietnam, Bangladesh, and Myanmar. The average price for containerized DDGS to Southeast Asia hit \$414/MT this week.

## Country News

---

**Brazil:** Despite the drought, a record *safrinha* corn crop is expected. The consultancy AgroConsult pegged the safrinha crop at 89.3 MMT, a 1.7 MMT increase over its previous forecast. Meanwhile, IMEA says the harvest is going the fastest in five years and AgRural reports that country-wide it is 11 percent complete. However, one constraint is the price of trucking fuel which is up 36 percent from a year ago. (Reuters; AgWeb; AgriCensus; SPGlobal)

**China:** Data from China's General Administration of Customs reveals that May imports of corn from Ukraine were 126.7 KMT, versus 1.26 MMT for the same period a year ago. (Refinitiv)

**EU:** The drought has impacted corn more than barley with the summer maize crop lowered by 0.6 percent to 5.73 MMT, but spring barley increased by 0.2 percent to 4.19 MMT. The winter barley crop estimate is now 5.73 MMT, a 0.9 percent reduction from the May estimate. (MARS)

**Japan:** MAFF reports that the ratio of corn in animal feed compounds fell slightly from a year earlier to 47.3 percent in April. Meanwhile, the share of barley in feed rose slightly to 3.9 percent. (Reuters)

**Jordan:** Government agency MIT purchased 120 KMT of barley for October-November shipment. (AgriCensus)

**South Korea:** MFG took advantage of the drop in futures and purchased 185 KMT of corn for September delivery. (AgriCensus)

**Malaysia:** The government suspended import fees on livestock grains and feed. (AgriCensus)

**Tunisia:** Government agency ODC booked 50 KMT of barley for July-August delivery. (AgriCensus)

**Ukraine:** Corn exports reached 585 KMT in first-half June, though still less than half of total grain exports. Meanwhile, winter barley harvesting has begun. (AgriCensus)

## Ocean Freight Comments

**Transportation and Export Report: Jay O'Neil, O'Neil Commodity Consulting:** Dry-bulk freight markets are reluctantly following commodity market in a downward slump. In freight markets, it has been a story of reduced steel demand in China and a related drop in iron ore imports, along with an overall soft global economic picture and fears of a potential coming recession. All freight sectors are feeling the pain as daily hire rates have continued to drop. Q3 Panamax daily hire rates slipped to \$22,575/day with Q4 paper down to \$20,900/day. An ominous economic shadow has been cast across shipping markets.

Container market rates are also softening. U.S. consumer demand is finally dropping off and, with it, demand for containers. Spot rates are now below annual contract rates, and one has to wonder if the market will really need all the new-build container ships?

U.S. West Coast labor contract negotiations are ongoing with no sign of an agreement. The 1 July contract expiration will certainly pass without a new agreement in place.
